

WHAT IS CLAIMED IS:

1. An external-character font creation system for creating external-character fonts, the external-character font creation system comprising:

5 a display unit displaying an external-character code registration screen based on an external-character code table that shows a correspondence between an external-character code of an external character to be registered and a master code; and

10 an edit unit registering a master code corresponding to an external-character code in the external-character code table.

2. The external-character font creation system according to Claim 1, the external-character font creation system further comprising:

15 a font selection screen selecting an external-character font of an external-character file to be created based on a correspondence relationship between a master font and an external-character font;

20 a font selecting section selecting a plurality of external-character fonts of the external-character file by using the font selection screen; and

an external-character file creating section creating an external-character file of the external-character font selected by the font selecting section.

25 3. The external-character font creation system according to Claim 1, the external-character font creation system further comprising a character pattern reference file definition table defining a master-font file in which a character pattern defined by the master code is referred to among a plurality of master-font files that are classified into types of designs of external-character fonts.

35 4. The external-character font creation system according to Claim 1, the external-character font creation system further comprising a character pattern

registering section copying a character pattern from a master-font file into an external-character file based on a master code.

5 5. The external-character font creation system according to Claim 1, wherein the external-character code table lists character patterns in place of master codes.

6. The external-character font creation system according to Claim 3, the external-character font creation system further comprising a character shape
10 confirmation font file storing character patterns which makes it possible to confirm character shapes of master codes, as another master font file.

7. The external-character font creation system according to Claim 3, wherein a master-font file defined
15 within the character pattern reference file definition table is either a master-font file by design type or a symbol master-font file.

8. The external-character font creation system according to Claim 3, wherein a master-font file defined
20 within the character pattern reference file definition table is either a master-font file by design type or a master-font file of a specific design.

9. A program recording medium recorded with a program for making a computer create an external-
25 character font, wherein

the program recording medium is recorded with a program for making the computer achieve

a display function for displaying an external-character code registration screen based on an
30 external-character code table that shows a correspondence between an external-character code of an external character to be registered and a master code, and

an edit function for registering a master code corresponding to an external-character code in the
35 external-character code table.

10. The program recording medium according to Claim 9, wherein

the program recording medium is further
recorded with a program for making the computer achieve
a font selecting function for selecting a
plurality of external-character fonts of an external-
5 character file by using a font selection screen for
selecting an external-character font of the external-
character file to be created based on a correspondence
relationship between a master font and an external-
character font; and

10 an external-character file creating
function for creating an external-character file of the
external-character font selected by the font selecting
function.

11. The program recording medium according to Claim
15 9 or 10, wherein

the program recording medium is further
recorded with a program for making the computer achieve
a function of creating a character pattern
reference file definition table for defining a master-
20 font file in which a character pattern defined by the
master code is referred to among a plurality of master-
font files that are classified into types of designs of
external-character fonts.
